CHARCHA

Jatin Aggarwal | IILM University

THE GREAT INDIAN AI INTERNSHIP CHALLENGE

Different languages. One shared conversation.

Multilingual voice + video. Updates each listener can acknowledge.

THE MOMENT THAT MATTERS

Asha speaks Hindi. Ravi listens in Telugu. Meher in Punjabi. A workshop moves from Room 3 to Room 4. Each listener needs the same update. Charcha keeps the message, correction and acknowledgements together.

01

Speak & follow

Hear translated speech and read original + translated captions in the meeting.

02

Correct & acknowledge

A new version requests fresh listener acknowledgements. Earlier versions stay visible.

03

Keep a shared record

Export a bilingual recap to PDF, text or a WhatsApp sharing preview.

Gnani at the core

Prisma — Speech recognition → **Evon v3.3** — Translation → **Timbre** — Speech synthesis

+ Consented personal-voice cloning

Routing. LiveKit SFU, shared target-language branches, bounded queues and ordered playback.

Control. Host admission, refresh recovery and private reviewer resource choices. React/TypeScript, FastAPI and Keycloak.

Compute. Prepare before joining; hold Evon during meetings; release when unused. Startup and warm idle time can be billed.

VoiceShield. Optional experimental source-audio screening with visible results. Detection accuracy is not established.

Evidence you can inspect

1,579 backend passed 1 skipped

335 frontend passed

7 runtime passed

10 Nov 2026 | Local checks; providers mocked.

Deployed & checked. All 43 backend source-file hashes matched tested code. Protected anonymous requests denied; build and mobile UI checks passed.

TWO RECORDED CASES / 9 NOV

3.94 s / 4.23 s

Hindi-to-English: original turn / typed correction. Translation start to first decoded synthesis audio; excludes STT, meeting transport and listener playback.

A Telugu speaker's perspective

The platform provides a really useful way to communicate with people who speak different languages through both text and voice translation. I liked how it makes conversations more accessible and helps people understand each other better. The experience was engaging and easy to follow, although there is some scope to improve response latency. Overall, it's a useful platform that can help people connect without language barriers.

Sathvika | Tech student and Telugu speaker | Approved personal feedback.

CODE, PITCH + EVIDENCE

LIVE APPLICATION https://charcha-234398803946.asia-south2.run.app/

Meeting creation requires host or reviewer access.

Acknowledgements record reported understanding, not contractual agreement. Ten language options; pairwise quality requires evaluation.

Film: fictional personas, scripted three-account UI and prepared standard-voice readings. AI-assisted development and presentation.
